# FEATURES

- Power light/indicator on heat tape system.
- A Thermal Pipe Package is a fully assembled economy hydrant assist kit (E-HAK).
- Comes with a 1" PVC supply line.
- Equipped with a self-regulating heat cable.
- All components are non-corrosive – PVC, brass or stainless steel.

# BENEFITS

- Service or remove the supply line and heat tape package quickly from the surface without digging it up.
- A Thermal Pipe Package will not freeze in any weather condition if the power is on. Self regulating heat cable has a conductive core that reacts to changes in temperature.
- 1" PVC supply line can be unscrewed and removed from the ground, allowing the heat tape to be secured into place while the pipe is above ground.
- Each Thermal Pipe Package is custom built with a standard 3" PVC riser, or a super insulated 3" PVC riser for maximum supply line protection. Packages can be built any length from 1' bury to 10' bury.
- SE Universal Check Valve can be added to any unit, providing an automatic water shut off. This allows any site to be instantly winterized, or individually localized for service and repairs.
- Stainless steel staple is designed to secure the waterline when stapled over the 1" x 4" brass nipple.

## Ideal situations for a **THERMAL PIPE PACKAGE**

- Any Livestock Watering Systems
- Lake Cabins
- Elevated Cabins/Houses
- Mobile Homes

Homes Without Basements

Lake Cabins
